## ***INTRODUCTION***

The results presented in this report were obtained from the **analysis** of the data collected during Saint Lucia's 2010 Population and Housing Census after doing extensive data cleaning and consistency checking. However, this work is on-going and this means that the figures herein are subject to review and may not exactly match final Census statistics. The Central Statistical Office will continue to add relevant tables to this publication as the census dataset is analysed further in conformity with prescribed regional and international recommendations for the release of a more detailed set of results of the 2010 Census later in the year.

Additionally, the comparisons made between the 2010 and 2001 census figures may be affected by definitional and other analytical variations. Therefore, users of this information should scrutinize the related tables with an appropriate degree of caution.

The differences in definition among such terms as "Enumerated Population", "Estimated Population" and "Household Population" must also be taken into account. Note that the enumerated population is the sum of all persons recorded on visitation records and/or census questionnaires, while the estimated population is the enumerated population plus an estimate of persons who belong to existing households but who could not be contacted/counted throughout the process of census enumeration. The household population includes all persons who reside in private households in Saint Lucia.

## ***DEFINITIONS***

### **1. Building**

A building is any independent free-standing structure comprising one or more rooms or other spaces, covered by a roof and usually enclosed within external walls or dividing walls of adjoining buildings that extend from the foundations to the roof. A building may be a factory, shop, detached dwelling, apartment building, warehouse, repair shop, poultry pen etc. NOTE that detached rooms relating to main buildings are treated as part of the main buildings, for example detached kitchens, toilets, servants quarters, garages, etc.

### **2. Closed Building**

A closed building is one, which, at the time of enumeration, is in use but with all the usual residents temporarily absent i.e. **absent for less than six months** (neighbors can usually help with identifying a closed building).

### **3. Vacant Building**

A vacant building is one, which at the time of enumeration is not being used for any purpose. Also to be included in this category are buildings, which are **closed for six (6) months or more**.

### **4. A Dwelling Unit**

A dwelling unit is any building or separate and independent part of a building in which a person or group of persons is living at the time of the census enumeration. It must have direct access from the street or common landing, staircase, passage or gallery where occupants can enter or leave without passing through anybody else's living quarters. A dwelling unit is one in which a household resides. This may be a single house, flat, apartment, out room, part of a commercial building or a boarding house catering for less than six persons.

### **5. Closed Dwelling unit**

A closed dwelling unit is a dwelling unit, which is occupied, but during the enumeration period, the occupants are temporarily away, that is **away for less than six (6) months**.

A dwelling unit may be closed because the residents are away either on holiday or for some other reason. In such a case you may find out from the neighbour, the number of persons who live there, their sex and their surnames, if possible.

### **6. Vacant Dwelling Unit**

If a dwelling unit is habitable but no one is living there at the time of your enumeration it is to be considered vacant, a habitable dwelling unit whose residents are **away for more than six months** is also to be considered vacant. A dwelling unit number cannot be assigned to a vacant dwelling unit on the Census Visitation record.

### **7. Household**

A household consists of one or more persons living together (i.e. sleeping most nights of a week 4 out of 7) and sharing at least one daily meal. It is important to note that a member of a household need not be a relative of the main family. For example, a boarder or a domestic servant who sleeps in most nights of the week is a member of the household. It is possible for a household to consist of just one person, or of more than one family, as long as they share living arrangements. A group of unrelated persons living together can also comprise a household.

## **8. Head of Household**

For Census purposes every household must have a head. The Head of the Household is the person recognized as such by the respondent. In cases where the respondent does not accept the idea of a head, this role is assigned to a responsible adult.

## **9. Institution**

The institutional population comprises persons who are not members of households. These include correctional and penal institutions (Bordelais Correctional facility, Boys Training Centre), dormitories of schools and universities, religious institutions, hospitals and so forth.

## **10. A business**

A business is an activity that is carried on in a systematic, continuous and regular manner, with an expectation of financial return or profit, from the exchange for work and acceptance of risk and the sale of goods and or services.

## ***THE POPULATION SIZE AND DENSITY***

The island-nation of Saint Lucia recorded an overall household population increase of 5 percent from May 2001 to May 2010 based on estimates derived from a complete enumeration of the population of Saint Lucia during the conduct of the recently completed 2010 Population and Housing Census.

Saint Lucia's total resident population as at midnight on Census Day, the 10th May 2010 stood at 166,526 persons. Saint Lucia's total population including non-resident persons was estimated to be 173,720, the total number of non-resident persons was 7,194. The preliminary count of Saint Lucia's enumerated population was 151,864 persons reflecting a response rate to the census of 92%. The total resident population of St. Lucia is comprised of 82,926 males and 83,600 females. Out of this sum, there were 165,595 individuals residing in private households, 931 persons living in institutions (See Tables, 1(a), 1(b), 2 and 3).

An estimate of persons who were not counted because they could not be contacted during the census' enumeration phase was added to the enumerated household population of 151,864 to produce an estimated household population of 165,595 persons. This total compared to the 2001 Census' estimated household population of 157,775 indicates an overall household population increase of 5.0 percent.

Out of the ten districts in Saint Lucia, household population contractions were reported in the districts of Laborie, Dennery and Choiseul. Laborie recorded the largest household population decrease. See Table 7.

Preliminary 2010 Census results show that Saint Lucia's island wide population density is 796 persons per square mile. This figure was calculated using a land area of 208 square miles that excludes Saint Lucia's forest reserve areas. These forest reserve areas cover approximately 30 square miles. The district of Castries, the location of Saint Lucia's capital city, had a population density of 2,139 persons per square mile. The least densely populated district, with a population density of 434 persons per square mile, was the district of Soufriere. The district of Gros Islet, which experienced the most rapid population expansion, recorded a population density of 643 individuals per square mile up from 532 in 2001 (See Table 8). In 1991, census figures reported a population density of 345 persons per square mile in the district of Gros Islet. Gros Islet was the least densely populated district in Saint Lucia at that time.

## ***GEOGRAPHIC DISTRIBUTION AND POPULATION GROWTH***

Preliminary counts from the St. Lucia 2010 Population and Housing Census show that the largest proportion of Saint Lucia's Population reside in Castries (See Table 7). The total population of the district of Castries increased by 2% and represents approximately 40% of Saint Lucia's total population. Approximately 26% or 43,545 persons of Census 2010's estimated population lives in rural Castries as compared to 17% or 26,795 persons in 2001, an increase of 9% over the nine year inter-censal period. Suburban Castries, with a population share of 11% recorded in 2010 saw a decline in population share from 15% in 2001. The

population of Castries City fell to 2.5% of the total population in 2010 down from 7.9% in 2001. The Population Census of 2010, therefore, showed clearly that there has been substantial movement of the population away from Castries City and into Rural Castries and Gros-Islet. The next most populated district was Gros-Islet with a population share of 15.2% in 2010 up from 13% in 2001. This represented an increase of 21% in the population of the district from 20,872 in 2001 to 25,210 in 2010. The least populated district of Saint Lucia in 2010 was the district of Canaries. This district's proportion of the estimated population of Saint Lucia was 1.2%.

Overall the district of Castries which accounted for 40 percent of the estimated population of Saint Lucia in 2010 saw virtually no change in its share of the total population from 2001. However, in 2010, there were only 1,312 more persons living in the Castries District than in 2001. This represents a 2% increase in population of Castries.

The district of Gros Islet experienced the greatest percentage increase in population. In 2010, Gros Islet's population was 20.8% more than it was in 2001. This means that, since 2001, Gros Islet's population has increased by an average of over 2% percent a year four times the rate of increase in the population of Saint Lucia. This increase represents an additional 4,338 persons who joined the ranks of the population of the district.

Among Saint Lucia's ten districts, seven districts encountered household population percentage expansions. In order of significance these are, Gros-Islet (20.8%), Canaries (14.3%), Soufriere (10.7%), Vieux-Fort (10.4%), Anse-La-Raye (3.1%), Castries (2.0%) and Micoud (1.5%). When comparing the ten year period 1991 to 2001 versus 2001 to 2010 the migration of people toward the north slowed somewhat, however the rural to urban movement has continued with Vieux-Fort and Soufriere recording above average increases in population size.

Of the Districts experiencing declines in the size of the population, the largest population outflow was experienced by Laborie, a decline of (-9.0%) followed by Dennery (-1.5%) and Choiseul (-0.5%).

## ***HOUSEHOLD SIZE AND STRUCTURE***

For Saint Lucia's 2010 Population and Housing Census 54,005 households were enumerated and it is estimated that there was 58,891 households on the island in May 2010. In 2001, the total estimated number of households was 47,541, consequently, there was an increase of 23.9% or 11,350 in the number of household in Saint Lucia during the inter-censal period. When contrasted with the increase in population of 5.0%, it is clear that the average household size in Saint Lucia has declined significantly.

The average household size for Saint Lucia decreased from 4.0 persons per household in 1991 to 3.3 persons per household in 2001 and in 2010 declined further to 2.8 persons. On the district level, the average household sizes ranged from 3.0 persons, recorded in the district of Choiseul, to 2.6 persons reported in the district of Gros Islet. In contrasting the censuses of 2001 and 2010, all the districts in Saint Lucia experienced a decline in their average household size.

The district of Vieux-fort, however, recorded the sharpest decline, there the average household size fell from 3.5 persons in 2001 to 2.8 persons in 2010.

The standard of living within Saint Lucian households improved steadily over the ten years since 2001. Many more households, across the island, attained access to the basic amenities required to alleviate situations of poverty.
