

SAINT LUCIA

VITAL STATISTICS REPORT

-2005-

Issued by:
The Government Statistics Department
Castries
Saint Lucia
Website: www.stats.gov.lc

OUR MISSION

**TO PROVIDE TIMELY ACCESS
TO COMPREHENSIVE,
ACCURATE, RELIABLE
INFORMATION ABOUT ST. LUCIA
TO ANYONE, ANYWHERE, ANYTIME**

FOREWORD

This is the Twenty-Second Annual Digest of Vital Statistics published by this Department.

The purpose of the publication is to provide Demographers, Planners, Research Workers and the General Public with certain base series on Vital Statistics.

This publication gives details on Births, Deaths, Marriages and Divorces: future publications will encompass a wider cross-section of Vital Statistics.

The Department acknowledges the assistance received from the Ministry of Health (Statistics Unit) and the Registry Department.

Notification of errors and omissions as well as suggestions for improvement will be welcomed.

It was decided to realign some of the previously used district boundaries to match those used in the 1991 Population and Housing Census. As a result there have been some changes in the District Totals.

NB. All data for 2005 is provisional.

DIRECTOR OF STATISTICS

October 2007

ACKNOWLEDGEMENTS

The Department would like to recognise the efforts of those staff members who participated in the preparation of this report.

Collection of data is managed by Ms. Valentine Quinlan with the assistance of Ms. Petrolina Auguste and Ms. Leca James under the supervision of Mr. Rossini Lawrence.

Preparation of Maps was managed by Sherma Lawrence and Darran Henry.

The Report was compiled by Ms. Valentine Quinlan ably assisted by Mr. Rossini Lawrence and Mr. Christian Lawrence.

DEFINITIONS AND EXPLANATORY NOTES
ON VITAL STATISTICS, RATES AND TERMS

AGE AND SEX COMPOSITION

MEDIAN AGE :- The age at which half the population is older and half is younger.

CHILD-WOMAN RATIO:- is the number of children under 5 years of age per 1,000 women 15 - 49 years in a given year.

$$\frac{\text{Population under 5}}{\text{Female Population 15 - 49}} \times 1000$$

AGE DEPENDENCY RATIO:-is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population. The higher the dependency ratio value, the larger the number of people outside the working age groups to be "supported by" people of working age. A good value : is a low value

$$\frac{\text{Population under 15 + Population over 64}}{\text{Population 15 - 64}} \times 100$$

SEX RATIO:- The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.

The sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.

MORTALITY

CRUDE DEATH RATE:- Number of deaths in year

$$\frac{\text{Number of deaths in year}}{\text{Mid-year Population}} \times 1000$$

This rate tells us how many people die per 1,000 population in a given year.

(X)

INFANT MORTALITY

$$\text{RATE :-} \quad \frac{\text{Number of deaths to persons 0 - 1}}{\text{Number of live-births in year}} \times 1000$$

The Infant Mortality Rate tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.

Maternal Deaths are those caused by deliveries and complications of pregnancy, child-birth and puerperium.

MATERNAL MORTALITY

$$\text{RATE:-} \quad \frac{\text{Number of maternal deaths}}{\text{Number of live-births in year}} \times 100,000$$

This rate tells us the annual number of maternal deaths per 100,000 live-births in that same year.

STILL BIRTH RATE:-

$$\frac{\text{Number of still-births}}{\text{Number of live-births in year}} \times 1000$$

LIFE TABLE FUNCTIONS

${}_nq_x$ - Represents probabilities that persons will die before reaching the beginning of the next age interval.

l_x - Represents the number living at the beginning of the age interval.

e_x - This figure gives us the average remaining life expectancy at any age.

FERTILITY

$$\text{CRUDE BIRTH RATE} = \frac{\text{Number of Live-births in year}}{\text{Mid-year Population}} \times 1000$$

This rate simply tells us how many live-births take place in a certain year per 1000 population.

(XI)

TOTAL FERTILITY RATE: Tells us what the completed family size would be if the fertility rate behaviour of a given year continued unchanged into the future.

NET REPRODUCTIVE RATE: is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

POPULATION CHANGE

RATE OF NATURAL INCREASE: is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

$$\frac{\text{Number of Births in year} - \text{Deaths in that same year}}{\text{Mid-year Population of that same year}} \times 1000$$

$$\text{CRUDE MARRIAGE RATE} = \frac{\text{Number of Marriages in year}}{\text{Mid-year Population in that same year}} \times 1000$$

$$\text{CRUDE DIVORCE RATE} = \frac{\text{Number of Divorces in year}}{\text{Mid-year Population in that same year}} \times 1000$$

SOURCE: Unless otherwise stated the tables in this publication are derived from data obtained from the Registrar of Civil Status.

ANALYSIS OF VITAL STATISTICS

The Vital Statistics Report for 2005 highlights Population, Births, Deaths, Marriages and Divorces.

POPULATION

The population estimated at the end of June 2005 was 164,587 reflecting an absolute increase of 2153 a 1.3% increase from 162,434 in 2004.

BIRTHS

Registered Births numbered 2215 in 2005 as compared to the 2384 births registered in 2004. The crude birth rate of 13.5 per 1000 population represents a 5.6% decrease under the previous year's rate of 14.3 per 1000. The birth rate for 2005 is low due to a general decrease in births in that year.

The decrease in the absolute number of registered births and crude birth rate do not constitute conclusive evidence of a downward trend in the child-bearing experience of women in the society. A better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.

The Total Fertility Rate of 3.8 in 1980 has declined slowly to 3.5 in 1985 and 1.5 in 2005 (See Page 6). It is important to note that 2.1 is the point at which the population is replacing itself.

The incidence of Teenage pregnancies has been the focus of attention in the society throughout this past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programmes by the Population Policy Unit, the Ministry of Health, the Ministry of Education and also the Family Planning Unit.

The percentage distribution of births by age of Mother occurring in 2004 and 2005 indicate that number of births to mothers aged less than 20 years has gone down slightly from 452 in 2004 and 380 in 2005, 1.6% of these births are to mothers 12-14 years in 2005 and 1.8% in 2004. At the same time, however, the proportion of births to women aged 20-24 years is at 25.0% in 2004 and 28.2% in 2005. Births to women 25-29 years are 22.5% in 2004 and 23.7% in 2005. Together these three age groups account for 66.4% and 69.1% of total births in 2004 and 2005 respectively.

Mean Age of Childbearing

The average age of mothers in 2005 was 31.2 years for legitimate born children as compared to 25.5 years for illegitimate born children. In the year 2004 however the average age was 31.5 years for legitimate as compared to 25.6 years for illegitimate born children. These figures indicate that married mothers seek to have children at an older age that is at least 6 years older than un-married mothers.

Mean Age of Children Bearing by District

On comparing the districts in 2005 the lowest average age at child-bearing was recorded for Canaries that is 24.6 years while the highest was recorded by Soufriere was 27.1 years. This indicates that for the year 2005 Soufriere mothers on an average waited for an extra three years for child-bearing.

In 2004 the highest average age at child-bearing was recorded for Laborie as 27.7 years, Soufriere was the lowest recording an average age as 25.4 years.

BIRTH WEIGHTS

Weight is a personal characteristic that distinguishes children from each other. Weight has implications for both the physical and mental health of the child. Both overweight and underweight are issues to be examined towards formulation of health strategies and policies. Professional help from a paediatrician, dietician, or child psychologist may be necessary.

10.0% of births were below weight (2499 grammes and under) in 2005 as compared to 10.9% in the previous year. 85.0% were average (between 2500 - 4000 grammes) in 2005 as compared to 83.7% in the previous year. 5.0% were over weight (4001 grammes+) for 2005 as compared to 5.4% in the previous year. The incidence of diabetes among younger persons contribute heavily to overweight babies.

The average weight for all babies born in 2005 was 3155 grammes. The male average weight was higher by 92 grammes being 3201 grammes as compared to that of females 3109.

In 2005 the average birth weight per district show a range of 3111 to 3313 grammes. Micoud records the lowest average weight of 3113 grammes while Soufriere has the highest average weight of 3313 grammes.

DEATHS

Total Deaths

Registered Deaths numbered 1107 in 2005 a 1.9% decrease under the 2004 figure of 1129 in the previous year. The crude death rate of 6.7 per 1000 population in 2005 is slightly lower than the 7.0 per 1000 population recorded in the previous year (See Page 6).

Average Age of Death

The average age of death was 57 years in 2005 and 58 years for 2004. The districts experiencing the lowest average for 2005 is Castries and Vieux-Fort reporting an average age of 49 years and 62 years respectively. In 2004 the same two districts experienced the lowest average age of death of 52 years and 56 years respectively.

Infant Deaths

Infant deaths numbered 46 in 2005 a 2.2% increase over the 45 infant deaths in 2004, causing the infant death rate to be 20.8 as compared to a rate of 18.9 in the previous year. This increase was due to conditions of the prenatal period, primarily the nutritional condition of the mother. Other conditions affecting the incidence of infant deaths are better sanitation, increase in the educational level of mothers.

Cause of Death

Of the Seventeen Causes of Death Categories listed, the highest incidence of deaths in 2005 occurred under the heading *Diseases of the Circulatory System* numbering 373 or 33.7% of total deaths. It is interesting to note that the 2005 figure of 373 decreased by 4 under the figure of 377 for the previous year.

Diseases of the Circulatory System still remains the highest cause of death. Neoplasm conditions is the second highest numbering 160 in 2005 or 14.5%, as compared to 181 or 16.0% in the previous year. The high incidence of death by circulatory disease is associated with persons over 50, and also with general progress in the society, it can also be attributed to the adoption of the American lifestyle. The decrease in the number indicated for Neoplasm conditions points to persons going for medical examination on a regular basis.

Average Age by Selected Cause of Death

In 2005 the average age for persons dying of Cancers is 67 years, eight years older than the average age of the previous year, females record an average age of 65 years while males are higher by 4 years and record an average of 69 years. In 2004 the overall average is 59 years, the male average was 66 years while the female average was 51 years.

In 2005 the average age for persons dying of Heart Disease was 71 years, males record an average of 68 years while females were higher recording an average of 74 years. In 2004 the overall average for Heart Disease was 72 years, the male average was 69 years while the female average was 76 years.

Cerebro-vascular Disease followed a similar pattern in 2005 the overall average was 71 years, males record average age of 70 years while females were higher recording an average of 73 years. In 2004 the overall average was 71 years, the male average being 69 years while the female average was 76 years.

External Causes is the group which experiences the youngest average age of death. In 2005 the average age was 37 years, the males recorded an average age of 37 years while females were lower recording an average of 29 years. In 2004 the average age was 40 years, the males average age was 35 years while the females recorded a higher average age of 58 years.

By Month

There was no significant difference in the occurrence of deaths by month. The deaths range from a low of 74 in October to a high of 119 in September of 2005. A range of 78 in September and 128 in December occurred in the previous year 2004.

MARRIAGES

Previous Marital Status

A total of 591 marriages were registered in 2005 as compared to 542 in 2004. It is observed that there is a steady increase in marriages from 540, to 542 to 591 in the last three years 2003, 2004 and 2005. It is expected that the 2005 figure will increase, because of late returns from the registrars to head office.

Of the 591 marriages, which occurred in 2005, 93.4% were between bachelors and spinsters as compared to 95.6% between the same group in the previous year.

By Age

83.6% of the marriages were to brides 44 years and under in 2005 as compared to 83.4% in the previous year. Whereas 77.3% of grooms married below age 44 in 2005 as compared to 76.0% in the previous year.

The average age at marriage in 2005 for males 38 years while females was 34 years. In 2004 the average age of marriage was 38 years for males and 35 years for females.

Children Born To Women Before Marriage

28.2% of women getting married for the first time in 2005 had already borne children as compared to 23.6% in the previous year.

DIVORCES

Number of divorces went down to 127 in 2005 as compared to 131 in the previous year. This reflects a 3.1% decrease in the absolute number of divorces between the two years.

Age

85.8% of divorces occur to males over 35 years in the year 2005 as compared to 90.8% in the previous year.

74.0% of divorces occur to females over 35 years in 2005 as compared to 77.9% in the previous year.

The average age at divorce for males is 46 years while female is 43 years in 2005 as compared to 46 years for males and 42 years for females in the previous year.
