### *DEFINITIONS AND EXPLANATORY NOTES ON VITAL STATISTICS, RATES AND TERMS*

#### *AGE AND SEX COMPOSITION*

*MEDIAN AGE :- The age at which half the population is older and half is younger.*

*CHILD-WOMAN RATIO:- is the number of children under 5 years of age per 1,000 women 15 - 49 years in a given year.*

$$\frac{\text{Population under } 5}{\text{Female Population } 15 - 49} \times 1000$$

*AGE DEPENDENCY RATIO:- is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population. The higher the dependency ratio value, the larger the number of people outside the working age groups to be "supported by" people of working age. A good value : is a low value*

$$\frac{\text{Population under } 15 + \text{Population over } 64}{\text{Population } 15 - 64} \times 100$$

*SEX RATIO:- The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.*

*The sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.*

#### MORTALITY

$$\frac{\text{CRUDE DEATH RATE:- Number of deaths in year}}{\text{Mid-year Population}} \times 1000$$

*This rate tells us how many people die per 1,000 population in a given year.*

(X)

### **INFANT MORTALITY**

RATE :-

$$\frac{\text{Number of deaths to persons } 0 - 1}{\text{Number of live-births in year}} \times 1000$$

*The Infant Mortality Rate tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.*

*Maternal Deaths are those caused by deliveries and complications of pregnancy, child-birth and puerperium.*

### **MATERNAL MORTALITY**

RATE:-

$$\frac{\text{Number of maternal deaths}}{\text{Number of live-births in year}} \times 1000$$

*This rate tells us the annual number of maternal deaths per 1000 live-births in that same year.*

### **STILL BIRTH RATE:-**

$$\frac{\text{Number of still-births}}{\text{Number of live-births in year}} \times 1000$$

### **LIFE TABLE FUNCTIONS**

$nq_x$  - *Represents probabilities that persons will die before reaching the beginning of the next age interval.*

$l_x$  - *Represents the number living at the beginning of the age interval.*

$e_x$  - *This figure gives us the average remaining life expectancy at any age.*

### **FERTILITY**

#### **CRUDE BIRTH RATE = Number of Live-births in year**

$$\frac{\text{Mid-year Population}}{\text{X 1000}}$$

*This rate simply tells us how many live-births take place in a certain year per 1000 population.*

(XI)

**TOTAL FERTILITY RATE:** Tells us what the completed family size would be if the fertility rate behaviour of a given year continued unchanged into the future.

**NET REPRODUCTIVE RATE:** is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

**POPULATION CHANGE**

**RATE OF NATURAL INCREASE:** is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

$$\frac{\text{Number of Births in year} - \text{Deaths in that same year}}{\text{Mid-year Population of that same year}} \times 1000$$

$$\frac{\text{CRUDE MARRIAGE RATE} = \text{Number of Marriages in year}}{\text{Mid-year Population in that same year}} \times 1000$$

$$\frac{\text{CRUDE DIVORCE RATE} = \text{Number of Divorces in year}}{\text{Mid-year Population in that same year}} \times 1000$$

**SOURCE:** Unless otherwise stated the tables in this publication are derived from data obtained from the Registrar of Civil Status.

## ANALYSIS OF VITAL STATISTICS

*The Vital Statistics Report for 2006 highlights Population, Births, Deaths, Marriages and Divorces.*

### POPULATION

*The population estimated at the end of June 2006 was 166,387 reflecting an absolute increase of 2057 a 1.2% increase from 164,330 in 2005.*

### BIRTHS

*Registered Births numbered 2209 in 2006 as compared to the 2298 births registered in 2005. The crude birth rate of 13.3 per 1000 population represents a 5% decrease under the previous year's rate of 14.0 per 1000. The birth rate for 2006 is low due to a general decrease in births in that year.*

*The decrease in the absolute number of registered births and crude birth rate do not constitute conclusive evidence of a downward trend in the child-bearing experience of women in the society. A better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.*

*The Total Fertility Rate of 3.8 in 1980 has declined slowly to 3.5 in 1985 and 1.5 in 2006 (See Page 6). It is important to note that 2.1 is the point at which the population is replacing itself.*

*The incidence of Teenage pregnancies has been the focus of attention in the society throughout this past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programmes by the Population Policy Unit, the Ministry of Health, the Ministry of Education and also the Family Planning Unit.*

*The percentage distribution of births by age of Mother occurring in 2005 and 2006 indicate that number of births to mothers aged less than 20 years has gone down slightly from 397 in 2005 and 378 in 2006, 2.6% of these births are to mothers 12-14 years in 2006 and 1.8% in 2005. At the same time, however, the proportion of births to women aged 20-24 years is at 27.8% in 2005 and 29% in 2006. Births to women 25-29 years are 23.9% in 2005 and 21.3% in 2006. Together these three age groups account for 68.7% and 67.0% of total births in 2005 and 2006 respectively.*

### Mean Age of Childbearing

*The average age of mothers in 2006 was 31.1 years for legitimate born children as compared to 25.6 years for illegitimate born children. In the year 2005 however the average age was 31.2 years for legitimate as compared to 25.6 years for illegitimate born children. These figures indicate that married mothers seek to have children at an older age that is at least 6 years older than un-married mothers.*

### Mean Age of Children Bearing by District

*On comparing the districts in 2006 the lowest average age at child-bearing was recorded for Canaries that is 24.3 years while the highest recorded was 27.8 years by Gros Islet. This indicates that for the year 2006 Gros Islet mothers on an average waited for an extra three years for child-bearing.*

*In 2005 the highest average age at child-bearing was recorded for Soufriere as 27.4 years, Canaries was the lowest recording an average age as 24.2 years.*

### BIRTH WEIGHTS

*Weight is a personal characteristic that distinguishes children from each other. Weight has implications for both the physical and mental health of the child. Both overweight and underweight are issues to be examined towards formulation of health strategies and policies. Professional help from a paediatrician, dietician, or child psychologist may be necessary.*

*10.7% of births were below weight (2499 grammes and under) in 2006 as compared to 9.8% in the previous year. 84.0% were average (between 2500 - 4000 grammes) in 2006 as compared to 85.2% in the previous year. 5.3% were over weight (4001 grammes+) for 2006 as compared to 5% in the previous year. The incidence of diabetes among younger persons contribute heavily to overweight babies.*

*The average weight for all babies born in 2006 was 3147 grammes. The male average weight was higher by 152 grammes being 3220 grammes as compared to that of females 3068.*

*In 2006 the average birth weight per district show a range of 3046 to 3279 grammes. Anse la raye recorded the lowest average weight of 3046 grammes while Soufriere has the highest average weight of 3279 grammes.*

### DEATHS

#### Total Deaths

*Registered Deaths numbered 1019 in 2006 a 8.2% decrease under the 2005 figure of 1110 in the previous year. The crude death rate of 6.12 per 1000 population in 2006 is slightly lower than the 6.8 per 1000 population recorded in the previous year (See Page 6).*

#### Average Age of Death

*The average age of death was 56 years in 2006 and 2005. The districts experiencing the lowest average for 2006 is Castries and Vieux-Fort reporting an average age of 49 years and 54 years respectively. In 2005 the same two districts experienced the lowest average age of death of 48 years and 62 years respectively.*

### Infant Deaths

*Infant deaths numbered 49 in 2006 the same as the previous year, causing the infant death rate to be 22.2 in 2006 as compared to a rate of 21.3 in the previous year. This increase was due to conditions of the prenatal period, primarily the nutritional condition of the mother. Other conditions affecting the incidence of infant deaths are better sanitation, increase in the educational level of mothers.*

### Cause of Death

*Of the Seventeen Causes of Death Categories listed, the highest incidence of deaths in 2006 occurred under the heading Diseases of the Circulatory System numbering 340 or 33.4% of total deaths. It is interesting to note that the 2006 figure of 340 decreased by 33 under the figure of 373 for the previous year.*

*Diseases of the Circulatory System still remains the highest cause of death. Neoplasm conditions is the second highest numbering 151 in 2006 or 14.8%, as compared to 160 or 14.4% in the previous year. The high incidence of death by circulatory disease is associated with persons over 50, and also with general progress in the society, it can also be attributed to the adoption of the American lifestyle. The decrease in the number indicated for Neoplasm conditions points to persons going for medical examination on a regular basis.*

### Average Age by Selected Cause of Death

*In 2006 the average age for persons dying of Cancers is 69 years, two years older than the average age of the previous year, females record an average age of 65 years while males are higher by 4 years and record an average of 69 years. In 2005 the overall average is 59 years, the male average was 66 years while the female average was 51 years.*

*In 2006 the average age for persons dying of Heart Disease was 72 years, males record an average of 70 years while females were higher recording an average of 73 years. In 2005 the overall average for Heart Disease was 71 years, the male average was 68 years while the female average was 73 years.*

*Cerebro-vascular Disease followed a similar pattern in 2006 the overall average was 73 years, males record average age of 70 years while females were higher recording an average of 75 years. In 2005 the overall average was 71 years, the male average being 70 years while the female average was 73 years.*

*External Causes is the group which experiences the youngest average age of death. In 2006 the average age was 39 years. The males recorded an average age of 38 years while females were higher recording an average of 55years. In 2005 the average age was 40 years, the males average age was 35 years while the females recorded a higher average age of 58 years.*

By Month

*There was no significant difference in the occurrence of deaths by month. The deaths range from a low of 69 in June to a high of 105 in March of 2006. A range of 81 in June and 120 in September occurred in the previous year 2005.*

MARRIAGES

Previous Marital Status

*A total of 602 marriages were registered in 2006 as compared to 641 in 2005. This year observed a decrease in marriages from 542, to 641 to 602 in the last three years 2004, 2005 and 2006.*

*It is expected that the 2006 figure will increase, because of late returns from the registrars to head office.*

*Of the 602 marriages, which occurred in 2006, 96.3% were between bachelors and spinsters as compared to 93% between the same group in the previous year.*

By Age

*88.2% of the marriages were to brides 44 years and under in 2006 as compared to 82.4% in the previous year. Whereas 80.4% of grooms married below age 44 in 2006 as compared to 76.4% in the previous year.*

*The average age at marriage in 2006 for males was 37 years while females was 33 years. In 2005 the average age of marriage was 38 years for males and 35 years for females.*

Children Born To Women Before Marriage

*29% of women getting married for the first time in 2006 had already borne children as compared to 27.5% in the previous year.*

**DIVORCES**

*Number of divorces went down to 104 in 2006 as compared to 135 in the previous year. This reflects a 29.8% decrease in the absolute number of divorces between the two years.*

**Age**

*85.6% of divorces occur to males over 35 years in the year 2006 as compared to 86.7% in the previous year.*

*78.8% of divorces occur to females over 35 years in 2006 as compared to 74.8% in the previous year.*

*The average age at divorce for males is 44 years while female is 42 years in 2006 as compared to 46 years for males and 43 years for females in the previous year.*
