OUR MISSION

To provide timely access to comprehensive, accurate, reliable information about St. Lucia to anyone, anywhere, anytime.

FORWARD

This Vital Statistic report was published by the Central Statistics Office.

The purpose of this publication is to provide Demographers, Planners, Research Workers and the General Public with certain base series on Vital Statistics.

This publication is intended to provide specifics on Births, Deaths, Marriages and Divorces.

The Central Statistics Office wishes to acknowledge the assistance received from the Ministry of Health (Epidemiology Unit) and the Civil Status Registry.

Notification of errors and omissions as well as suggestions for improvement will be welcomed.

It was decided to realign some of the previously used district boundaries to match those used in the 1991 Population and Housing Census. As a result, there have been some changes in the District Totals.

DIRECTOR OF STATISTICS

June 2017

ACKNOWLEDGEMENTS

The Department would like to recognize the efforts of those staff members who participated in the preparation of this report.

Collection of data is managed by Ms. Jacinta Francis with the assistance of Ms. Leca James, Abigail Fedee and Mr. Christian Lawrency.

The compilation of this report was supervised by Ms. Jacinta Francis with the assistance of the staff of the Demographic Unit.

POPULATION

1.1 Estimated Mid-Year Population By Sex And Five Year Age Groups 2011 -2014 13

1.2 Censes Population by Age & Sex 1980, 1991, 2001, 2010 and the Projected Population 2025 14

BIRTHS

2.1 Total Live-Births By Sex, Age of Mother at Present Birth and Parity 2013, 2014 15-16

2.2 Total Live-Births By Age of Mother at Present Birth, Parity and Normal residence of Mother By Broad Census Districts 2013, 2014 17-26

2.3 Total Live-Births By Age of Mother at Present Birth, By Sex and Month 2013, 2014 27-28

2.4 Total Live-Births By Age of Mother at Present Birth, District and Month 2013, 2014 29-38

2.5 Total Live-Births Born to Teenage Mothers By Parity 2013, 2014 39-40

TABLE		PAGE
2.6	Total Live-Births Born to Teenage Mothers by Parity and District 2013, 2014	41-50
2.7	Total Births By Residence of Mother and Specific Place of Occurrence 2013, 2014	51-52
2.8	Total Live-Births By Residence of Mother and Place of Occurrence 2013, 2014	53-54
2.9	Infant Weight at Birth, by Age of Mother and Census District 2013, 2014	55-64
2.10	Infant Weights at Birth by Parity and Census District 2013, 2014	65-74

DEATHS

3.1	Total Deaths By District of Residence and Age Group 2013,2014	75-76
3.2	Total Deaths By Place of Occurrence & District 2013, 2014	77-78
3.3	Deaths By Residence and Specific Place of Occurrence 2013, 2014	79-80
3.4	Total Death By Age Group and Month 2013, 2014	81-82
3.5	Number of Deaths By Sex and Age Group 2013- 2014	83
3.6	Total Deaths in the First Year of Life 2013, 2014	84-85

TABLE		PAGE
MARRIAGES		
4.1	Marriages By Previous Civil Status of Bride and Groom 2013, 2014	86-87
4.2	Marriages By Age of Bride and Groom 2013, 2014	88-89
4.3	Marriages By Age of Bachelor and Spinster and Civil Condition of Bride and Groom 2013,2014	90-91
4.4	Number of Children Born to a Woman at time of Marriage* By Age of Woman 2013, 2014	92-93
4.5	Marriages By Month 1998 – 2014	94
4.6	Marriages By Religious Denominations 1998 – 2014	95
4.7	Marriages By District of Registration and Religious Denominations 2013, 2014	96-97
DIVORCE		
5.1	Divorces Absolute By Age of Female Partner and Duration of Marriages 2013, 2014	98-99
5.2	Divorces Absolute By Age of Female Partner and Number of Children of Marriage 2013, 2014	100-101
5.3	Divorces Absolute By Age of Male Partner and Age Of Female partner 2013, 2014	102

CHARTS

6. Marriage Rate VS. Divorce Rate (1993 to 2014)	12

DEFINITION AND EXPLANATION ON VITAL STATISTICS, RATES AND TERMS

AGE AND SEX COMPOSITION

MEDIAN AGE: The age at which half the population is older and half is younger.

CHILD-WOMAN RATIO: is the number of children under 5 years of age per 1,000 women 15 - 49 years in a given year.

$$\frac{\text{Population Under 5}}{\text{Female Population 15 - 19}} \times 1000$$

AGE DEPENDENCY RATIO: is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population. The higher the dependency ratio value, the larger the number of people outside the working age groups to be "supported by" people of working age. A good value for the age dependency ratio is a low value.

$$\frac{\text{Population under 15} + \text{Population over 64}}{\text{Population 15 - 64}} \times 100$$

SEX RATIO: The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.

It should be noted that the sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.

MORTALITY

CRUDE DEATH RATE: this is a basic common measure of mortality. It is defined as the number of deaths in a year per 1000 of the mid-year population.

$$\frac{\text{Number of deaths in year}}{\text{Mid - year Population}} \times 1000$$

INFANT MORTALITY RATE: tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.

$$\frac{\text{Number of deaths to persons 0 to 1}}{\text{Number of live births in year}} \times 1000$$

Maternal Deaths are those caused by deliveries and complications of pregnancy, child-birth and puerperium.

METERNAL MORTALITY RATES: this rate tells us the annual number of maternal deaths per 1000 live-births in that same year.

$$\frac{\text{Number of maternal deaths}}{\text{Number of live births in year}} \times 1000$$

STILL BIRTH RATE: is the number of stillbirths per 1000 births (live and stillbirths).

$$\frac{\text{Number of still births}}{\text{Number of live births in a year}} \times 1000$$

LIFE TABLE FUNCTIONS

${}_nq_x$ - Represents probabilities that persons will die before reaching the beginning of the next age interval.

l_x - Represents the number living at the beginning of the age interval.

e_x - This figure gives us the average remaining life expectancy at any age.

FERTILITY

CRUDE BIRTH RATE: this rate simply tells us how many live-births take place in a certain year per 1000 population.

$$\frac{\text{Number of Live Births in year}}{\text{Mid – year Population}} \times 1000$$

TOTAL FERTILITY RATE: tells us what the completed family size would be if the fertility rate behavior of a given year continued unchanged into the future. It can also be defined as the total number of children that would be born to each woman if she lived to the end of her child-bearing years and give birth to children in alignment with the prevailing age-specific fertility rates. It is calculated by totaling the age-specific fertility rates.

NET REPRODUCTIVE RATE: is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

POPULATION CHANGE

RATE OF NATURAL INCREASE: is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

$$\frac{\text{Number of Births in year} - \text{Deaths in that same year}}{\text{Mid – year Population of that same year}} \times 1000$$

NUPTIALITY

CRUDE MARRIAGE RATE: is the number of marriages per 1000 population

$$\frac{\text{Number of Marriages in year}}{\text{Mid – year Population in that same year}} \times 1000$$

CRUDE DIVORCE RATE: is the number of divorces per 1000 population

$$\frac{\text{Number of Divorces in year}}{\text{Mid – year Population in that same year}} \times 1000$$

ANALYSIS OF VITAL STATISTICS

The Vital Statistics Report for 2014 highlights Population, Births, Deaths, Marriages and Divorces.

POPULATION

The population estimated at the end of June 2014 was 172,623 reflecting an absolute increase of 1748, that is, a 1.02% increase from 170,875 in 2013.

BIRTHS

Registered Births numbered 2,026 in 2014 as compared to 2,175 registered births in 2013. The crude birth rate of 11.7 per 1000 population is reflective of an increase in the rate achieved in the previous year of 12.7 per 1000 population in 2013.

Despite the low figures achieved for births it should be noted that the registered births and crude birth rate does not provide sufficient evidence to conclude that a downward trend exist in the child-bearing experience of women in Saint Lucia. In fact, a better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.

Overtime there has been a significant decline in the total fertility rate. The Total Fertility Rate of 2.1 in 2000 has declined slowly to 1.7 in 2006, moving to 1.5 in 2011 and finally to 1.4 in 2014. It should be noted that a fertility rate of 2.1 is the point at which the population is replacing itself, hence it should be noted that the average number of births for Saint Lucia is presently below replacement level.

The incidence of Teenage pregnancies has been the focus of attention in the society throughout the past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programs by the Ministry of Health, the Ministry of Education and also the Family Planning Unit. The adolescent (teenage) fertility rate has experienced decreases overtime, moving from 62.3 in 2002 to 45.4 in 2010 and to 41.1 in 2014.

The percentage distribution of births by age of mother occurring in 2013 and 2014 indicate that number of births to mothers less than 20 years old has increased slightly from 295 in 2013 and 301 in 2014. Higher fertility rates were experienced by women aged 20-24 years. The proportion of births to women aged 20-24 years is at 27.08% in 2013 and 26.45% in 2014. Births to women 25-29 years amounted to 25.15% in 2013 and 23.74% in 2014. The summation of these three age groups account for 65.79% and 65.05% of total births in 2013 and 2014 respectively. The lowest birth rates were experienced in the 40-44 and 45-49 years' age groups. In 2013 and 2014, there was a total of 4 and 8 births respectively by women in the 45-49 years' age group.

Mean Age of Child bearing

In 2014, the average age of mother was 26.95 years as compared to 26.98 years in 2013. This figure remained relatively the same, however a very minimal increase of 0.03 was seen. In 2014, the modal child bearing age was 22 years. The minimum child bearing age was 14 years and the maximum child bearing age was 47 years.

Mean Age of Child Bearing by District

On comparing the districts in 2014 the lowest average age at child-bearing was recorded for Canaries at 25.05 years while the highest was recorded by Choiseul was 28.95 years. This indicates that for the year 2014 Choiseul mothers on an average waited for close to four years for child-bearing. In 2013, the highest average age of child bearing was recorded for Canaries that is 25.05 years while the highest recorded was 28.95 years by Choiseul.

Birth Weights

Weight is a personal characteristic that distinguishes children from each other. Weight has implications for both the physical and mental health of the child. Both overweight and underweight are issues to be examined towards formulation of health strategies and policies. Professional help from a pediatrician, dietician, or child psychologist may be necessary.

Between the year 2013 and 2014 there was little variation in the birth weights of babies. 11.20% of births were below weight (2499 grams and under) in 2014 as compared to 11.17% in the previous year. 84.11% were average (between 2500 - 4000 grams) in 2014 as compared to 84.23% in the previous year. 4.69 % were overweight (4001 grams+) for 2014 as compared to 4.6% in the previous year. The incidence of diabetes among younger persons contribute heavily to overweight babies.

The average weight for all babies born in 2014 was 3110.40 grams. The male average weight was higher by 77.34 grams being 3148.69 grams as compared to that of females 3071.35 grams.

In 2014, the average birth weight per district show a range of 2869.89 to 3199.45 grams. Canaries recorded the lowest average weight of 2869.89 grams while Choiseul has the highest average weight of 3199.45 grams.

DEATHS

Registered Deaths numbered 1358 in 2014 a 22.23% increase under the 2013 figure of 1111 in the previous year. The crude death rate of 7.9 per 1000 population in 2014 is slightly higher than the 6.5 per 1000 population recorded in 2013.

Average Age of Death

The average age of death was 67.2 years in 2014. The median and modal age of death was 71 years and 80 years respectively. The district with the lowest average age of death occurrence in 2014 was Vieux Fort, reporting an average age of death of 63.65 years.

Infant Deaths

In 2014 infant deaths numbered 30 three figures less than the previous year. The infant mortality rate for 2014 is 14.8 and 15.2 for previous year. Hence in 2014 for every 1000 live births in Saint Lucia there were approximately 14.8 infant death as compared to approximately 15.2 infant deaths for 2013. According to the Ministry of Health's Chief Medical Officer's report, perinatal conditions and congenital anomalies are significant contributors to severe illness and death among infants in Saint Lucia every year. Perinatal conditions persist as the leading cause of death and appear among the top five causes of hospitalization for 2014. Congenital anomalies do not appear among the leading causes of hospitalization, but continue to be the 2nd leading cause of infant deaths.

According to the Ministry of Health, the extent and role of maternal risk factors in fetal and infant health outcomes (such as pre-term birth, low birth weight, obesity, diabetes, hypertension, alcohol, tobacco, HIV, rural residence and psychosocial stressors) need to be fully understood and addressed to deter the incidence of preventable fetal and infant deaths.

By Month

There was no significant difference in the occurrence of deaths by month. The deaths range from a low of 68 in May to a high of 142 in October of 2014 as compared to a figure of 76 in January and 108 in July 2013.

MARRIAGES

Previous Marital Status

A total of 494 marriages were registered in 2014 as compared to 511 in 2013. This year observed an increase in marriages from 305 in 2012, increasing to 511 in 2013 and decreasing once again to 494 in 2014.

Of the 494 marriages, which occurred in 2014, 91.1% were between bachelors and spinsters. This figure was quite close to the 88.1% for 2013. Marriages of widowed women accounted for 0.61% of the total marriages for 2014. Also 8.2 % of divorced women and 12.75% of divorced men got married in 2014.

By Age

78% of the marriages were to brides 44 years and under in 2014 as compared to 80% in the previous year. While 70% of grooms married below age 44 in 2014 as compared to 74% in the previous year.

In 2014, most marriages took place in the 25-29 years age group for brides and the 25-29 years age group for bride grooms.

The average age at marriage in 2014 for males was 39 years while females were 36 years. In 2013, the average age of marriage was 38 years for males and 35 years for females. The median age of marriage in 2013 is 33 years for males and 37 years for females. The modal age of marriage is 30 years for females in 2014. As it relates to the modal age of marriage for males, it should be noted that multiple modes exist, that is, ages 26 to 28; 31 and 39.

Children Born to Women Before Marriage

18.21% of women getting married for the first time in 2014 had already borne children as compared to 19% in the previous year.

DIVORCES

There was an increase in the total number of divorces. The number of divorces increased from 51 in 2013 to 106 in 2014. This reflects an increase of 51.9% in the absolute number of divorces between the two years.

Age

95.3% of divorces occur to males over 35 years in the year 2014 as compared to 92% in the previous year. 85% of divorces occur to females over 35 years in 2014 as compared to 76% in the previous year.

The average age at divorce for males is 48 years while female is 45 years in 2014 as compared to 47 years for males and 43 years for females in the previous year. The modal age for divorce in 2013 is 40 and 52 years for males and 46 years for females. The median age of divorce for males in 2014 is 48 years and 45 years for females.
