

FOREWORD

This is the Thirteenth Annual Digest of Vital Statistics published by this Department.

The purpose of the publication is to provide Demographers, Planners, Research Workers and the general public with certain base series on Vital Statistics.

This publication gives details on Births, Deaths, Marriages and Divorces: future publications will encompass a wider cross-section of Vital Statistics.

The Department acknowledges the assistance received from the Ministry of Health (Statistics Unit) and the Registry Department.

Notification of errors and omissions as well as suggestions for improvement will be welcomed.

It was decided to realign some of the previously used district boundaries to match those used in the 1991 Population and Housing Census. As a result there have been some changes in the district totals.

NB. All data for 1996 is provisional.

DIRECTOR OF STATISTICS

NOVEMBER 1997

ACKNOWLEDGEMENTS

The Department would like to recognise the efforts of those staff members who participated in the preparation of this report.

The Report was compiled by Ms. Geraldine St.Croix, and ably assisted by Mrs Valentine Quinlan and under the general supervision of the head of the Demographic section, Ms ethel Jn. Baptiste.

**DEFINITIONS AND EXPLANATORY NOTES
ON VITAL STATISTICS, RATES AND TERMS**

AGE AND SEX COMPOSITION

MEDIAN AGE :- The age at which half the population is older and half is younger.

AGE DEPENDENCY RATIO:-is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population.

$$\frac{\text{Population under 15} + \text{Population over 64}}{\text{Population 15 - 64}} \times 100$$

SEX RATIO :-The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.

The sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.

MORTALITY

CRUDE DEATH RATE:-Number of deaths in year
----- x 1000
Mid-year Population

This rate tells us how many people die per 1,000 population in a given year.

INFANT MORTALITY

RATE :-
Number of deaths to persons 0 - 1
----- x 1000
Number of live-births in year

The Infant Mortality Rate tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.

(x)

LIFE TABLE FUNCTIONS

${}_nq_x$ - Represents probabilities that persons will die before reaching the beginning of the next age interval.

l_x - Represents the number living at the beginning of the age interval.

e_x - This figure gives us the average remaining life expectancy at any age.

FERTILITY

CRUDE BIRTH RATE =
$$\frac{\text{Number of Live-births in year}}{\text{Mid-year Population}} \times 1000$$

This rate simply tells us how many live-births take place in a certain year per 1000 population.

TOTAL FERTILITY RATE: Tells us what the completed family size would be if the fertility rate behaviour of a given year continued unchanged into the future.

NET REPRODUCTIVE RATE: is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

POPULATION CHANGE

RATE OF NATURAL INCREASE: is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

$$\frac{\text{Births 1997} - \text{Deaths 1997}}{\text{Mid-year Population 1997}} \times 1000$$

SOURCE: Unless otherwise stated the tables in this publication are derived from data obtained from the Registrar of Civil Status.

ANALYSIS OF VITAL STATISTICS

The Vital Statistics Report for 1996 highlights Births, Deaths, Marriages and Divorces.

BIRTHS

Registered Births numbered 3148 in 1996 as compared to the 3705 births registered in 1995. The crude birth rate of 21.4 per 1000 population represents a 16.1 % decrease under the previous year's rate of 25.5 per 1000. The birth rate for 1996 is low because of under-coverage of births for 1996 due to late transmission of data by district registrars.

The decrease in the absolute number of registered births and crude birth rate do not constitute conclusive evidence of a downward trend in the child-bearing experience of women in the society. A better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.

The Total Fertility Rate of 3.8 in 1980 has declined slowly to 3.5 in 1985 and 2.4 in 1996 (See Page 4).

The incidence of Teenage pregnancies has been the focus of attention in the society throughout this past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programmes by the Population Policy Unit, the Ministry of Health, the Ministry of Education and also the Family Planning unit.

The percentage distribution of births by age of Mother occurring in 1995 and 1996 indicate that number of births to mothers aged 19 and under has fallen from 662 in 1995 to 522 in 1996, 2.1% of these births are to mothers 12-14 years in 1996 as well as in 1995. At the same time, however, the proportion of births to women aged 20-24 years is hovering at 29.1% in 1995 and 30.3% in 1996. Births to women 25-29 are 24.0 % in 1995 and 24.3% in 1996. Together these three age groups account for 71.0 % and 71.2 % of total births in 1995 and 1996 respectively.

BIRTH WEIGHTS

8.8% of births were below weight (2499 grammes and under) in 1996 as compared to 9.5% in the previous year.

78.3% were average (between 2500 - 4000 grammes) in 1996 as compared to 83.2 % in the previous year.

While 6.2% were over weight in 1996 (4001 grammes+) as compared to 4.8% in the previous year.

The not stated category amounted to 6.7% in 1996 as compared to 2.5% in the previous year.

DEATHS

Total Deaths

Registered Deaths numbered 948 in 1996 a 0.8% increase over the 1995 figure of 940. The crude death rate of 6.4 per 1000 population in 1996 is a decrease under the rate of 6.5.

Infant Deaths

Number of infant deaths numbered 55 in 1996 a 27.9% increase over the 43 infant deaths in 1995, causing the infant death rate to be 11.6 a similar figure for the previous year. This increase was due to conditions of the prenatal period, primarily the nutritional condition of the mother.

Cause of Death

Of the Seventeen Causes of Death Categories listed the highest incidence of deaths in 1996 occurred under the heading Diseases of the Circulatory System numbering 416 or 43.9% of total deaths followed closely by Neoplasms which numbered 109 or 11.5%, as compared to 373 deaths or 39.7% for Diseases of the Circulatory System in 1995 and 101 deaths or 10.7% for Neoplasms in 1995.

By Month

There was no significant difference in the occurrence of deaths by month which ranges from a low of 63 in April to a high of 105 in January of 1996. As compared to a range of 67 in December and 97 in July 1995.

MARRIAGES

Previous Marital Status

A total of 496 marriages were registered in 1996 and 1995. It is expected that the 1996 figure will increase, because of late returns from the registrars to head office.

Of the 496 marriages, which occurred in 1996, 94.4% were between bachelors and spinsters as compared to 94.2% between the same group in the previous year.

By Age

89.7% of the Marriages were to brides 44 years and under in 1996 as compared to 92.7% in the previous year.

Whereas 83.9% of Grooms married below age 44 as compared to 87.5% in the previous year.

Children born to Women at time of marriage

28.9% of Women getting married for the first time in 1996 had already borne children as compared to 31.3% in the previous year.

DIVORCES

Number of Divorces went down to 47 in 1996 as compared to 53 in the previous year.

Age

60.4% of Divorces occur to Males between the ages 40-49 in the year 1996 as compared to 55.3% in the previous year.

Whereas 40.4% of divorces occur to females between 40-49 in 1996 as compared to 43.4% in the previous year.

SELECTED INDICATORS 1985 - 1996

	1985	1990	1991	1992	1993	1994R	1995R	1996P
