## FOREWORD

*This is the Fourteenth Annual Digest of Vital Statistics published by this Department.*

*The purpose of the publication is to provide Demographers, Planners, Research Workers and the general public with certain base series on Vital Statistics.*

*This publication gives details on Births, Deaths, Marriages and Divorces: future publications will encompass a wider cross-section of Vital Statistics.*

*The Department acknowledges the assistance received from the Ministry of Health (Statistics Unit) and the Registry Department.*

*Notification of errors and omissions as well as suggestions for improvement will be welcomed.*

*It was decided to realign some of the previously used district boundaries to match those used in the 1991 Population and Housing Census. As a result there have been some changes in the district totals.*

*NB. All data for 1997 is provisional.*

**DEFINITIONS AND EXPLANATORY NOTES  
ON VITAL STATISTICS, RATES AND TERMS**

**AGE AND SEX COMPOSITION**

**MEDIAN AGE** :- The age at which half the population is older and half is younger.

**AGE DEPENDENCY RATIO**:-is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population.

$$\frac{\text{Population under 15} + \text{Population over 64}}{\text{Population 15 - 64}} \times 100$$

**SEX RATIO** :-The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.

The sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.

**MORTALITY**

**CRUDE DEATH RATE**:-Number of deaths in year  
----- x 1000  
Mid-year Population

This rate tells us how many people die per 1,000 population in a given year.

**INFANT MORTALITY**

**RATE** :-  
Number of deaths to persons 0 - 1  
----- x 1000  
Number of live-births in year

The Infant Mortality Rate tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.

(x)

### **LIFE TABLE FUNCTIONS**

$nq_x$  - Represents probabilities that persons will die before reaching the beginning of the next age interval.

$l_x$  - Represents the number living at the beginning of the age interval.

$e_x$  - This figure gives us the average remaining life expectancy at any age.

### **FERTILITY**

**CRUDE BIRTH RATE** = 
$$\frac{\text{Number of Live-births in year}}{\text{Mid-year Population}} \times 1000$$

This rate simply tells us how many live-births take place in a certain year per 1000 population.

**TOTAL FERTILITY RATE:** Tells us what the completed family size would be if the fertility rate behaviour of a given year continued unchanged into the future.

**NET REPRODUCTIVE RATE:** is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

### **POPULATION CHANGE**

**RATE OF NATURAL INCREASE:** is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

**Births 1997 - Deaths 1997**  
----- x 1000  
**Mid-year Population 1997**

**SOURCE:** Unless otherwise stated the tables in this publication are derived from data obtained from the Registrar of Civil Status.

## ANALYSIS OF VITAL STATISTICS

*The Vital Statistics Report for 1997 highlights Population, Births, Deaths, Marriages and Divorces.*

### **POPULATION**

*The population estimated at the end of June 1997 was 149,621 reflecting an absolute increase of 2574 a 1.75 % increase from 147,047 in 1996.*

### **BIRTHS**

*Registered Births numbered 3303 in 1997 as compared to the 3299 births registered in 1996. The crude birth rate of 22.1 per 1000 population represents a 1.34 % decrease under the previous year's rate of 22.4 per 1000. The birth rate for 1997 is low due to under-coverage of births for 1997. Late transmission of data by district registrars is the prime reason for such under-coverage.*

*The decrease in the absolute number of registered births and crude birth rate do not constitute conclusive evidence of a downward trend in the child-bearing experience of women in the society. A better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.*

*The Total Fertility Rate of 3.8 in 1980 has declined slowly to 3.5 in 1985 and 2.5 in 1997  
( See Page 4).*

*The incidence of Teenage pregnancies has been the focus of attention in the society throughout this past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programmes by the Population Policy Unit, the Ministry of Health, the Ministry of Education and also the Family Planning unit.*

*The percentage distribution of births by age of Mother occurring in 1996 and 1997 indicate that number of births to mothers aged 19 and under has fallen from 552 in 1996 to 535 in 1997, 2.8% of these births are to mothers 12-14 years in 1997 and 1.81 % in 1996. At the same time, however, the proportion of births to women aged 20-24 years is hovering at 30.4% in 1996 and 29.1% in 1997. Births to women 25-29 are 24.2 % in 1996 and 24.3% in 1997. Together these three age groups account for 71.3 % and 69.6 % of total births in 1996 and 1997 respectively.*

## BIRTH WEIGHTS

*10.6 % of births were below weight (2499 grammes and under) in 1997 as compared to 9.7 % in the previous year.*

*84.8% were average (between 2500 - 4000 grammes) in 1997 as compared to 83.8 % in the previous year.*

*4.5% were over weight in 1997 (4001 grammes+) as compared to 6.2% in the previous year.*

*The not stated category amounted to 0.2% in 1997 as compared to 0.3 % in the previous year.*

## DEATHS

### Total Deaths

*Registered Deaths numbered 976 in 1997 a 2.7% increase over the 1996 figure of 950. The crude death rate of 6.5 per 1000 population in 1997 remained the same as the rate in the previous year.*

### Infant Deaths

*Number of infant deaths numbered 58 in 1997 a 5.5 % increase over the 55 infant deaths in 1996, causing the infant death rate to be 17.6 as compared to a rate of 16.7 in the previous year. This increase was due to conditions of the prenatal period, primarily the nutritional condition of the mother.*

### Cause of Death

*Of the Seventeen Causes of Death Categories listed, the highest incidence of deaths in 1997 occurred under the heading Diseases of the Circulatory System numbering 348 or 35.7 % of total deaths. It is interesting to note that the 1997 figure of 348 decreased by 69 under the figure of 417 for the previous year. In spite of this decrease, Diseases of the Circulatory System still remains the highest cause of death. Neoplasm is the second highest numbering 102 in 1997 or 10.5%, as compared to 108 or 11.4% in the previous year.*

### By Month

*There was no significant difference in the occurrence of deaths by month. The deaths range from a low of 61 in April to a high of 98 in July of 1997. A range of 64 in April and 102 in January occurred in the previous year 1996.*

## MARRIAGES

### Previous Marital Status

*A total of 467 marriages were registered in 1997 as compared to 587 in 1996. It is expected that the 1997 figure will increase, because of late returns from the registrars to head office.*

*Of the 467 marriages, which occurred in 1997, 92.3% were between bachelors and spinsters as compared to 94.9% between the same group in the previous year.*

### By Age

*89.9% of the Marriages were to brides 44 years and under in 1997 as compared to 90.5% in the previous year.*

*Whereas 85.7% of Grooms married below age 44 in 1997 as compared to 84.3% in the previous year.*

### Children born to Women at time of marriage

*29.7% of Women getting married for the first time in 1997 had already borne children as compared to 31.3% in the previous year.*

## DIVORCES

*Number of Divorces went down to 37 in 1997 as compared to 50 in the previous year.*

### Age

*73% of Divorces occur to Males between the ages 40-49 in the year 1997 as compared to 54% in the previous year.*

*Whereas 54% of divorces occur to females between 40-49 in 1997 as compared to 40% in the previous year.*
