### **DEFINITIONS AND EXPLANATORY NOTES ON VITAL STATISTICS, RATES AND TERMS**

#### **AGE AND SEX COMPOSITION**

**MEDIAN AGE** :- *The age at which half the population is older and half is younger.*

**CHILD-WOMAN RATIO**:- *is the number of children under 5 years of age per 1,000 women 15 - 49 years in a given year.*

$$\frac{\text{Population under } 5}{\text{Female Population } 15 - 49} \times 1000$$

**AGE DEPENDENCY RATIO**:- *is the ratio of persons in the "dependent" ages (under 15 and over 64 years) to those in the "economically productive" ages (15-64 years) in a population. The higher the dependency ratio value, the larger the number of people outside the working age groups to be "supported by" people of working age. A good value : is a low value*

$$\frac{\text{Population under } 15 + \text{Population over } 64}{\text{Population } 15 - 64} \times 100$$

**SEX RATIO** :- *The Sex Ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.*

*The sex ratio at birth in most countries is about 105 or 106 males per 100 females. After birth, sex ratios vary because of different patterns of mortality and migration for males and females within the population.*

#### **MORTALITY**

**CRUDE DEATH RATE**:- *Number of deaths in year*

$$\frac{\text{Mid-year Population}}{\text{X } 1000}$$

*This rate tells us how many people die per 1,000 population in a given year.*

(X)

### **INFANT MORTALITY**

RATE :-

$$\frac{\text{Number of deaths to persons } 0 - 1}{\text{Number of live-births in year}} \times 1000$$

*The Infant Mortality Rate tells us how many infants (under 1) who die in a given year per 1,000 births in that same year.*

*Maternal Deaths are those caused by deliveries and complications of pregnancy, child-birth and puerperium.*

### **MATERNAL MORTALITY**

RATE:-

$$\frac{\text{Number of maternal deaths}}{\text{Number of live-births in year}} \times 100,000$$

*This rate tells us the annual number of maternal deaths per 100,000 live-births in that same year.*

### **STILL BIRTH RATE:-**

$$\frac{\text{Number of still-births}}{\text{Number of live-births in year}} \times 1000$$

### **LIFE TABLE FUNCTIONS**

$nq_x$  - *Represents probabilities that persons will die before reaching the beginning of the next age interval.*

$l_x$  - *Represents the number living at the beginning of the age interval.*

$e_x$  - *This figure gives us the average remaining life expectancy at any age.*

### **FERTILITY**

#### **CRUDE BIRTH RATE = Number of Live-births in year**

$$\frac{\text{Mid-year Population}}{\text{Number of Live-births in year}} \times 1000$$

*This rate simply tells us how many live-births take place in a certain year per 1000 population.*

(XI)

**TOTAL FERTILITY RATE:** Tells us what the completed family size would be if the fertility rate behaviour of a given year continued unchanged into the future.

**NET REPRODUCTIVE RATE:** is the average number of daughters that would be born to a woman if she passed through her life from birth conforming to the age specific fertility rates and mortality rates of a given year.

**POPULATION CHANGE**

**RATE OF NATURAL INCREASE:** is the rate at which a population is increasing (or decreasing) in a given year due to a surplus (or deficit) of births over deaths expressed as a percentage of the base population. This rate does not include the effects of migration.

$$\frac{\text{Births 2003} - \text{Deaths 2003}}{\text{Mid-year Population 2003}} \times 1000$$

$$\frac{\text{CRUDE MARRIAGE RATE} = \text{Number of Marriages in year}}{\text{Mid-year Population in that same year}} \times 1000$$

$$\frac{\text{CRUDE DIVORCE RATE} = \text{Number of Divorces in year}}{\text{Mid-year Population in that same year}} \times 1000$$

**SOURCE:** Unless otherwise stated the tables in this publication are derived from data obtained from the Registrar of Civil Status.

## ANALYSIS OF VITAL STATISTICS

*The Vital Statistics Report for 2002 highlights Population, Births, Deaths, Marriages and Divorces.*

### POPULATION

*The population estimated at the end of June 2003 was 160,620 reflecting an absolute increase of 1487 a 0.9% increase from 159,133 in 2002.*

### BIRTHS

*Registered Births numbered 2367 in 2003 as compared to the 2598 births registered in 2002. The crude birth rate of 14.7 per 1000 population represents an 8.9% decrease under the previous year's rate of 16.3 per 1000. The birth rate for 2003 is low due to a general decrease in births in that year.*

*The decrease in the absolute number of registered births and crude birth rate do not constitute conclusive evidence of a downward trend in the child-bearing experience of women in the society. A better indicator of change in fertility is the total fertility rate. This rate is a measure of the number of children a woman could expect to have in her lifetime, if at each age she had the same number of children women at those ages had in the year for which the rate was calculated.*

*The Total Fertility Rate of 3.8 in 1980 has declined slowly to 3.5 in 1985 and 1.7 in 2003.  
(See Page 5). It is important to note that 2.1 is the point at which the population is replacing itself.*

*The incidence of Teenage pregnancies has been the focus of attention in the society throughout this past decade and in an effort to postpone child-bearing and/or reduce fertility among potential teenage mothers, this age-group has been the target of special programmes by the Population Policy Unit, the Ministry of Health, the Ministry of Education and also the Family Planning Unit.*

*The percentage distribution of births by age of Mother occurring in 2002 and 2003 indicate that number of births to mothers aged less than 20 years has gone down from 463 in 2002 and 423 in 2003, 1.4% of these births are to mothers 12-14 years in 2003 and 1.7% in 2002. At the same time, however, the proportion of births to women aged 20-24 years is at 27.1% in 2002 and 24.8% in 2003. Births to women 25-29 years are 22.6% in 2002 and 22.1% in 2003. Together these three age groups account for 67.5 % and 64.8 % of total births in 2002 and 2003 respectively.*

### Mean Age of Childbearing

*The average age of mothers in 2003 was 31.0 years for legitimate born children as compared to 25.9 years for illegitimate born children. In the year 2002 however the average age was 30.8 years for legitimate as compared to 25.6 years for illegitimate born children. These figures indicate that married mothers seek to have children at an older age that is 5 years older than do un-married mothers.*

### Mean Age of Children Bearing by District

*On comparing the districts in 2003 the lowest average age at child-bearing was recorded for Canaries that is 25.3 years while the highest was recorded by Choiseul was 27.6 years. This indicates that for the year 2003 Choiseul mothers on an average waited for an extra two years for child-bearing.*

*In 2002 the highest average age at child-bearing was recorded for Choiseul as 28.1 years, Canaries was the lowest recording average age 24.5 years.*

### BIRTH WEIGHTS

*Weight is a personal characteristic that distinguishes children from each other. Weight has implications for both the physical and mental health of the child. Both overweight and underweight are issues to be examined towards formulation of health strategies and policies. Professional help from a paediatrician, dietician, or child psychologist may be necessary.*

*9.5% of births were below weight (2499 grammes and under) in 2003 as compared to 8.4% in the previous year. 85.2% were average (between 2500 - 4000 grammes) in 2003 as compared to 85.7% in the previous year. 5.2% were over weight in 2003 (4001 grammes+) as compared to 5.9% in the previous year. The incidence of diabetes among younger persons contribute heavily to overweight babies.*

*The average weight for all babies born in 2003 was 3183 grammes. The male average weight was higher by 101 grammes being 3232 grammes as compared to that of females 3131.*

*In 2003 the average birth weight per district show a range of 3128 to 3357 grammes. Dennery records the lowest average weight while Soufriere has the highest average weight of 3357 grammes.*

### DEATHS

#### Total Deaths

*Registered Deaths numbered 1046 in 2003 a 9.0% decrease over the 2002 figure of 960 in the previous year. The crude death rate of 6.5 per 1000 population in 2003 is slightly lower than the 6.0 per 1000 population recorded in the previous year (See Page 5).*

#### Average Age of Death

*The average age of death was 59 years in 2003 and 57 years for 2002. The districts experiencing the lowest average for 2003 is Castries and Vieux-Fort each reporting an average age of 54 years. In 2002 the districts of Vieux-Fort, Castries and Soufriere experienced the lowest average age of death that is 50 years, 52 years and 56 years each respectively.*

### Infant Deaths

*Infant deaths numbered 37 in 2003 a 2.8% increase over the 36 infant deaths in 2002, causing the infant death rate to be 15.6 as compared to a rate of 13.9 in the previous year. This decrease was due to conditions of the prenatal period, primarily the nutritional condition of the mother. Other conditions affecting the incidence of infant deaths are better sanitation, increase in the educational level of mothers.*

### Cause of Death

*Of the Seventeen Causes of Death Categories listed, the highest incidence of deaths in 2003 occurred under the heading Diseases of the Circulatory System numbering 341 or 32.6% of total deaths. It is interesting to note that the 2003 figure of 341 increased by 28 over the figure of 313 for the previous year.*

*Diseases of the Circulatory System still remains the highest cause of death. Neoplasm conditions is the second highest numbering 160 in 2003 or 15.3%, as compared to 164 or 17.1% in the previous year. The high incidence of death by circulatory disease is associated with persons over 50, and also with general progress in the society, it can also be attributed to the adoption of the American lifestyle. The decrease in the number indicated for Neoplasm conditions points to sick persons going for medical examination on a regular basis*

### Average Age by Selected Cause of Death

*In 2003 the average age for persons dying of Cancers is 65 years, females record an average age of 64 years while males are higher by 2 years and record an average of 66 years. In 2002 the overall average is 58 years, the male average was 59 years while the female average was 60 years.*

*In 2003 the average age for persons dying of Heart Disease was 71 years, males record an average of 70 years while females were higher recording an average of 73 years. In 2002 the overall average for Heart Disease was 72 years, the male average was 69 years while the female average was 75 years.*

*Cerebro-vascular Disease followed a similar pattern in 2003 the overall average was 73 years, males record average age of 69 years while females were higher recording an average of 76 years. In 2002 the overall average was 74 years, the male average being 72 years while the female average was 75 years.*

*External Causes are the group which experiences the youngest average age of death. In 2003 the average age was 36 years, the females recorded an average age of 34 years while males were higher recording an average of 38 years. In 2002 the average age was 38 years, the male average was 36 years while the female average recorded was 43 years.*

By Month

*There was no significant difference in the occurrence of deaths by month. The deaths range from a low of 72 in December to a high of 110 in May of 2003. A range of 63 in November and 103 in January occurred in the previous year 2002.*

MARRIAGES

Previous Marital Status

*A total of 489 marriages were registered in 2003 as compared to 500 in 2002. It is observed that there is a steady decline in marriages from 513 to 500 to 489 in the last three years 2001, 2002 and 2003. It is expected that the 2003 figure will increase, because of late returns from the registrars to head office.*

*Of the 489 marriages, which occurred in 2003, 97% were between bachelors and spinsters as compared to 98% between the same group in the previous year.*

By Age

*88.7% of the marriages were to brides 44 years and under in 2003 as compared to 88.2% in the previous year. Whereas 82.8% of grooms married below age 44 in 2003 as compared to 80.1% in the previous year.*

*The average age at marriage in 2003 for males 36 years while females was 33 years. In 2002 the average age of marriage was 37 years for males and 33 years for females.*

Children Born To Women Before Marriage

*27.7% of women getting married for the first time in 2003 had already borne children as compared to 28.6% in the previous year.*

## DIVORCES

*Number of divorces went up to 107 in 2003 as compared to 45 in the previous year. This reflects a 137.8% increase in the absolute number of divorces between the two years. This figure do not represent the true number of divorces that were granted in 2002, since the Registry Dept. started Electronic Data Entry of these records from 1999 i.e divorces filed prior to 1999 but granted after 1999 were not entered.*

## Age

*80.4% of divorces occur to males over 35 years in the year 2003 as compared to 84.4% in the previous year.*

*68.2% of divorces occur to females over 35 years in 2003 as compared to 77.8% in the previous year.*

*The average age at divorce for males is 43 years while female is 41 years in 2003 as compared to 44 years for males and 41 years for females in the previous year.*
