*This is a Survey Solutions implementation of the Population and Housing Census 2020 Visitation Record.*

*The IDENTIFICATION SECTION captures the information which identifies the building which you are visiting. The Identification section captures preloaded Identification information for each building. The District, Enumeration District, Block will be preloaded on the tablet in this section. Use the GPS COORDINATES to locate the building you will be enumerating.*

*The Building Unit roster captures a maximum of 30 dwelling units and within each dwelling unit a maximum of THREE households are allowed. In most cases it is not expected that there will be more than one household per dwelling unit.*

*Inside the building unit roster there are also rosters for businesses and for institutions by type.*

*A typical workflow would be:*

- a) The Enumerator arrives at the building using the ED map.*
  - b) The enumerator validates that this is the correct District , ED and Block*
  - c) The enumerator takes GPS from the base map*
  - d) The enumerator takes a validation GPS*
  - e) Enters the building*
  - f) List the first dwelling unit based on its location in the building.*
  - g) Contacts each household in the dwelling unit to list the head of each household within the dwelling unit and other requested information.*
  - h) Leaves the dwelling unit*
  - i) Proceeds to the next dwelling unit within the building and list it by location in the building.*
  - j) Proceeds to all subsequent dwelling units labelling each one based on its location in the dwelling unit until all dwelling units, business units and institutions within the dwelling unit are accounted for.*
  - k) Leaves the building and proceeds to the next building in the block.*
  - l) Process is repeated for each subsequent sequentially numbered building until all building in the block have been listed.*
  - m) Proceeds to the next block within the enumeration district.*
